CC-62

Caustic Powdered Lift Station Degreaser

CC-62

CC-62 is a concentrated, non-foaming, powdered lift station degreaser that is specially designed to dissolve fats, oils, and greases in municipal lift stations. CC-62 instantly dissolves grease build-up when applied into the lift station. The moisture in the lift station activates the CC-62 and the grease begins to dissolve.

Directions: cascade CC-62 onto grease build up in the lift station. For heavier build up, apply a thin layer over the grease. Allow product to work and reapply in two days. **Note:** do not use on steel, aluminum, tin, magnesium, or painted surfaces (unless stripping is desired).

For your protection, wear safety glasses, rubber gloves, and proper safety protection attire when using CC-62. CC-62 is considered corrosive material. Please take all precautions and use recommendations on the Safety Data Sheet.

Specifications

- Specific gravity: 8.7 PPG
- pH: 13
- Freezing point: 32°F

Application

For use in wastewater lift stations only.

Availability

CC-62 is available in 45 lb. pails and 500 lb. drums
