## SGC-520

### SGC-520

#### Booth Coating

SGC-520 is a non petroleum based barrier coating used on paint booth grates that does not require high pressure (40K) to be removed. It's 100% environmentally friendly, quick drying, and completely safe to work with. Once soiled with paint and over spray, no chemical strippers are needed for removing the soil from the grate (only pressured water). The coating is biodegradable and aids in paint separation during wastewater treatment and is highly effective for using in areas where it's hard to remove paint residue. SGC-520 has zero negative impact on the wastewater treatment process.

**Directions:** SGC-520 should be allowed to dry leaving a thin film. Excess paint will then stick as a barrier coating allowing grate cleaning at lower pressure with a pressure washer. The lower pressure water application will allow removal of paint due to a weakened bond.

#### Specifications

- Specific gravity: 1.13 PPG
- pH 10% slurry: 9.5
- Surface area, m<sup>2</sup>/g: 9.5
- Brightness, GEB: 80

#### Applications

- Paint booth walls
- Paint booth grates
- Robot arms
- Roller chains

#### Availability

SGC-520 is available in 525lb. drums and 45lb pails.
